Order N° 4/9/14 /MINESEC/ IGE = 9 DEC 2014 To outline the syllabuses for Form III, Form IV and Form V of Secondary General Education.

THE MINISTER OF SECONDARY EDUCATION,

Mindful of the Constitution; Mindful of the Law N° 98/004 of 14 April 1998 to lay down Guidelines for Education in Cameroon; Mindful of Decree N°2011/408 of 9 December 2011 to reorganise the Government; Mindful of Decree N°2011/410 of 9 December 2011 to form the Government; Mindful of Decree N°2012/267 of 11 June 2012 to organise the Ministry of Secondary Education;

HEREBY ORDERS AS FOLLOWS:

1 USC - / / U

Article 1: The syllabuses for Form III, Form IV and Form V of Secondary General Education shall be outlined as follows:

PREFACE

SYLLABUSES FOR 21ST CENTURY CAMEROON

At the beginning of this millennium, as Cameroon chooses to become an emerging nation by the year 2035, its secondary education sector faces many challenges. It should:

- www.meetlearn.com
- Offer quality training and education to most young Cameroonians within a context marked by large classes in primary education;
- Prepare them for smooth insertion into a more demanding job market worldwide, through a pertinent teaching /learning process.

In addition, training tools have significantly evolved in their conception and implementation. A school that was mostly based on contextualised knowledge acquisition has given room, all over the world, for a school that aims at empowering learners to help them cope with complex and diversified real life situations. Instead of a school cut off from society, we now have a school deeply rooted in a society that takes into account sustainable development, local knowledge and cultures.

The implementation of this new school ,prescribed by the Law to lay down guidelines for education in Cameroon, and the necessity for socio-professional insertion require the adoption of a pedagogic paradigm for the development of syllabuses relating to "The competence based approach with an entry through real life situations ".

In this perspective, new syllabuses for Secondary General Education, those of Teacher Education and Training Referentials for Technical Education are part of this great change for the re-dynamisation of our education system. They are in line with the implementation of the provisions of Growth and Employment Strategy Paper (DSCE) which, by the year 2020, specifies the minimum amount of knowledge which each Cameroonian is supposed to possess by the time they leave the first cycle of secondary education.

These syllabuses define essential competencies that should be acquired by learners within the first cycle of secondary education, in terms of knowledge, know how and attitudes. They equally define the framework that will enable teachers to organise their pedagogic activities.

While congratulating all those who designed these syllabuses, I hereby exhort all the members of the education family, notably teachers, to acquaint themselves with the new paradigm, to effectively implement it and make the Cameroon education system successful.

FIRST CYCLE SYLLABUS REVIEW

A PARTICIPATORY AND INNOVATIVE APPROACH

The syllabuses that were drawn up by the Inspectorate General of Education in the Ministry of Secondary Education since 2012 are in accordance with the major guidelines for education in general and secondary education in particular as they are enshrined both in the 1998 law to lay down guidelines for education in Cameroon and in the 2009 Growth and Employment Strategy Paper(DSCE).

These orientations could be summarised, amongst others, to train within the framework of an emerging Cameroon in the year 2035, citizens that will have a good mastery of the two official languages (English and French), deeply rooted in their cultures but open to a world in search for sustainable development and dominated by Information and Communication Technologies.

Conceived in the various Inspectorates of Pedagogy, and later introduced for trialling in secondary and high schools during the 2012/2013 school year, these syllabuses were developed with the contributions of classroom teachers and teacher trade unionists.

The new syllabuses had to undergo many changes:

- a shift from a skill based approach to a competence based approach through real life situations;
- a shift from a school cut off from society to one that prepares citizens for a smooth insertion into socio-cultural and economic activities ;
- a shift from an evaluation of knowledge to that of competences necessary to sustainable development.

When these new changes and orientations were taken into account, they naturally led to a shift of paradigm within the curriculum reform process. The option we have adopted is the competence based approach through real life situations.

The syllabuses of the first cycle of Secondary General Education are broken down into 5 areas of learning, each of them containing a given number of disciplines as shown in the table below. MATHEMATICS TEACHING SYLLABUS FOR FORMS 3, 4 AND 5 : CAMEROON Page **4**/**78**

Areas of learning	Disciplines
1- Languages and Literature	- French
	- English
www.meetlearn.c	OU-J Living Languages II
	 Ancient Languages
	 Literature(in English and in French)
2- Science and Technology	- Mathematics
	- The Sciences(Physics, Chemistry,
	Technology, Life and Earth Sciences)
	- Computer Science
3- Social Sciences/Humanities	- History
	- Geography
	- Citizenship Education
4- Personal Development	 Sports and Physical Education
	- Manual Labour
5- Arts and National Cultures	- National Languages
	- National Cultures
	- Arts

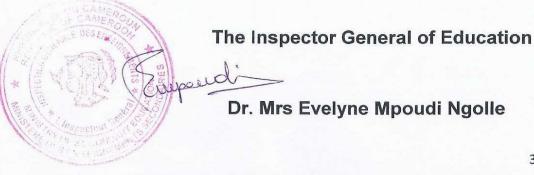

For 6e and 5e (Francophone sub -system of education), the weekly workload and the quota as compared to the total number of hours on the time table (32 h) are displayed in the table below.

Domaines d'apprentissage	Volume horaire	Quota
Langues et Littératures	10 h	30%
Sciences et Technologies	08 h	25%
Sciences Humaines	06 h	20%
Arts et Cultures Nationales	04 h	15%
Développement Personnel	03 h	10%

One hour is allotted for preps.

For the Anglophone sub-system of education (Form I and Form II) the same information is summarised in the table below.

Areas of Learning	Weekly workload	Quota
Languages and Literature	10 h	30%
Science and Technology	08 h	25%
Social Sciences	06 h	20%
Arts and National Cultures	04 h	15%
Personal Development	03 h	10%

END - OF - FIRST CYCLE LEARNER'S EXIT PROFILE

The first cycle of Secondary General Education admits young graduates from primary schools aged between ten and fourteen. Its general objectives are not only to build intellectual, civic and moral skills in these children but also competences and fundamental knowledge which will either enable them to foster their education in the second cycle, or to prepare them for a smooth insertion into the job market after professional training.

Thus, within the framework of these new syllabuses, the learner is expected, after the first cycle of secondary education, to be able to use his/her competences to solve problems through family of situations relating to domains of life as indicated in the table below:

N°	Domains/Areas of life	Families of situations to be treated in the 1 st cycle
1	Family and social life	 Participation in family life Healthy professional relationships Social integration
2	Economic life	 Discovery of income generating activities Discovery of the job market, social roles, jobs and professions Self confidence, aspirations, talents, self potential Practising healthy eating habits
3	Environment , health and well being	 Preservation of the Environment Quest for a healthy life style Choosing and practising a healthy life style
4	Citizenship	 Mastery of rules and regulations governing the Cameroonian society Discovery of cultural values and customs of the Cameroonian society
5	Media and Communications	 Discovery of the media world Discovery of Information and Communication Technologies

In order to achieve these objectives, the learner should be able to mobilise, within the various disciplines and constructive areas of learning of the syllabuses, all the pertinent resources in terms of knowledge, know how and attitudes.

The next table gives you a general overview of the afore-mentioned objectives, while the syllabus for each subject unfolds, in details, all the expected competences per level and at the end of the 1st cycle.

Areas of Learning	Disciplines	Expected outcomes at the end of the 1 st cycles
1-Languages and Literature	Living languages: English, French , German, Italian, Spanish, Chinese, Etc.	French and English , L1 Receptive skills: reading and listening Read in an autonomous way, different types of texts related to areas of life as defined in the syllabus; Listen and understand various texts related to the above mentioned areas of life Productive skills: speaking and writing Produce various types of texts , of average length related to these areas of life; Language tools: appropriate use of various language tools in order to produce and read types of texts related to that level;
	English to Francophone learners French to Anglophone learners	Communicate accurately and fluently using all four basic skills in language learning; Be able to transfer knowledge learnt in class to real life situations out of the classroom; Be able to cope and survive in problem solving situations;
		Living languages II Receptive skills: reading and listening Read and understand simple texts on social life, citizenship, the environment, well being and health, media etc Listen and get oral information in order to simply interact during communication situations related the various domains of life. Productive skills: speaking and writing Sing, recite, dramatise , orally answer questions related to the various domains of life as defined in the syllabus; Write short passages on various familiar topics.

	Ancient languages: Latin,	
	Greek	Develop general knowledge through ancient languages and
	National languages	cultures; know the origins of the French language for linguistic
		mastery;
	Literature	Carry out elementary tasks in translation.
MWW.	Cameroon Literature; French Literature;	
	Francophone Literature;	
	Other literatures	
		Use mathematic knowledge skills and values with confidence to
	Mathematics,	solve real life problems within the different domains of life;
2-Science and Technology	The Sciences	Communicate concisely and unambiguously and develop power of
	Computer Science	mathematical reasoning (logical thinking, accuracy and spatial
		awareness).
		The Sciences:
		Acquire the fundamentals of sciences in order to understand the
		functioning of the human body, the living world, the earth and the
		environment;
		Acquire methods and knowledge to understand and master the
		functioning of technical objects made by man to satisfy his needs;
		Demonstrate attitudes to protect his/her health and environment.
		Computer Science :
		Master the basics of Information and Communication
		Technologies;
		Exploit and use ICTs to learn.
		Possess cultural references to better locate events in time and
		space within a democratic system and become a responsible
	History	citizen.
3- Social Sciences		History:
/Humanities	Geography	Acquire a common culture ; be aware of heritage from the past and
		current challenges;
	Citizenship Education	Geography :
		Develop one's curiosity and knowledge of the world;
		Get acquainted with landmarks to find your way and fit in the world.

		Citizanahin Education:
		Citizenship Education:
		Possess essential knowledge in rights and duties in order to fulfil
		his/her citizenship.
4- Personal Development		Develop his / her physical abilities/skills ;
	Moral Education;	Get ready for physical challenges , save and regain energy after
MMM.	lieeliedii.c	physical efforts;
// \// \// \	Home Economics;	Identify risk factors; possess basic knowledge and principles in
		hygiene and health education;
	Sports and Physical	Demonstrate a sense of self control and appreciate the effect of
	Education	physical activities.
		Conceive and draw up sports and cultural animation projects;
	Health Education	Acquire methods and develop a high sense of efforts;
		Conceive, draw up and implement projects that will enable one to
		project his/her image and feel the well being inspired by self-
		confidence.
5- Arts and National		Artistic Education:
Cultures		Observe and appreciate works of art;
		Carry out an artistic activity;
		Gradually acquire the love for personal expression and creativity;
		Possess a mastery of creativity in music, plastic arts and the
		performing arts.
		Dramatise, recite texts (poems, tales, proverbs, etc.) relating to
		various areas of society;
	Arts/Artistic Education;	Practise the different dramatic genres: sketches, comedy, tragedy,
		drama, etc.
	National Cultures	National languages and Cultures
	National Cultures	Demonstrate a mastery of Cameroon cultures;
		Visit the various cultural areas of the country in order to discover
		their characteristics;
		Demonstrate a mastery of basic rules in writing Cameroonian
		written texts.
		languages as well as basic grammatical notions applied to these languages; Demonstrate a mastery of one of the national languages at 3 levels: morpho-syntax, reception and production of simple oral and

Even though the learners acquires skills in different disciplines, these competences are accompanied by other skills known as cross curricular competences related to intellectual, methodological, social and personal areas of learning.

MMM DEELECLU Colve Problem in a given situation;		
	- 1	Use knowledge skills and values with confidence in order to solve
		real life problems within the different domains of life;
		With confidence, find useful information to solve problems he/she
		is faced with;
		Give his/her opinion ;
6- Cross curricular	3	Support his/her opinion with strong arguments ;
competences	domains	Assess him/herself with a view to remediation;
		Demonstrate basic knowledge in note taking ;
		Conceive and realise individual projects;
		Analyse and summarise information, give feedback and report
		orally or in writing.
		Develop problem solving approaches;
		Exploit and use ICTs in his/her activities.
		Interact positively and assert his/her personality while respecting
		that of other people;
		Join team work, fit in a common initiative project /group;
	Social and Personal Domains	Demonstrate interest in cultural activities ;
		Develop a sense of effort, love for work, perseverance in tasks or
		activities carried out ;
		Understand and accept others in intercultural activities;
		Accept group assessment.

The resources to be mobilised by the learner are found in many disciplines and areas of learning. So it is important to implement these syllabuses not in isolation but as interrelated subjects. These remarks hold both for subject and cross curricular competences. They are so called to show that they should be developed through teaching/learning activities of the different subjects. The development of subject and cross curricular competences

concern the entire education family as they are capable of inspiring an educative project and the putting in place of extracurricular activities. The ultimate training goal of these syllabuses, at the end of the first cycle, is to enable the learner to be self reliant, to be able to keep on learning throughout his/her life, to contribute to sustainable development and become a responsible citizen.

GENERAL PRESENTATION

In the first two years of secondary education, ground work was made through the consolidation of Mathematics taught in the primary school, involving the broadening of basic Mathematical skills, introduction of basic facts, principles and notions, all to prepare learners to pursue further studies in the subject and other related courses. The content for forms 3, 4 and 5, has been selected to ensure continuity and reinforcement of what was done in lower forms. All of mathematical knowledge and skills acquired in junior forms will serve as pre-requisite knowledge for students to construct new knowledge. At the end of form 5, students are well equipped to sit in for the General Certificate of Education (GCE) Ordinary level and any other examination requiring knowledge and skills at this level. The topics are grouped into modules. While it is convenient to break them down into these smaller manageable units, it is important to remember that they do not stand in isolation from one another.

The forms 3, 4 and 5 Mathematics syllabus is also elaborated using the Competency – Based – Approach from a situated perspective (through real life situations) as that of forms 1 and 2. As mentioned in the syllabus for forms 1 and 2, it is only in a situation that a person develops his/her competence. It is only by dealing effectively with this situation that a person can be declared competent. With this approach, Mathematical knowledge and skills learned in the classroom is made functional (act as tools (resources), to solve problems in other subjects and in real life situations. This syllabus therefore emphasizes application of Mathematics to real life situations and a practical approach to teaching and learning. The course has been designed to enable the learner to acquire attitudes, knowledge and skills which will be relevant to his/her life after school.

This syllabus for forms 3, 4 and 5, also has a double goal which is:

- > The intellectual training of the learner to progressively develop abilities for experimentation, creativity and critical analysis so as to be able to take up fully, his role as a citizen.
- > The second goal is utilitarian; here it envisages the adaptation of scientific knowledge to international economic and environmental context.

OUTCOMES OR PROFILES OF THE LEARNER

At the end of the first cycle, the learner who has successfully gone through this content should among others be able to use Mathematics with confidence to solve real life problems within the different domains of life, communicate concisely and unambiguously and develop power of mathematical reasoning (logical thinking, accuracy and spatial awareness). To be more specific they have to:

- > Recognise, identify, write, communicate and use numbers in various ways;
- > Use different operations to calculate values within different life situations;
- Extract, translate and use Mathematical information from tables, charts, graphs, diagrams, coded figures, or from any document and from the environment;

- Recognize, identify, describe and make geometrical shapes /forms, develop skills and accuracy as well as have confidence in the use of instruments for measuring and drawing and ability to visualize 3-dimensional figures;
- > Acquire the methods and knowledge to understand and master the functioning of technical objects made by man to satisfy his needs;
- > Meet up with the challenges of life through the use of scientific methods in solving real life problems;
- > Appreciate the beauty of nature.

www.meetlearn.com

The Mathematics teaching syllabus for forms 3, 4 and 5 is designed so that teaching/learning at this level will continue to develop in learners the three fundamental competencies which are:

- Solve a problem within a situation (solve problems encountered within real life situations) so as to fully and autonomously assume role as a citizen;
- > Display a logical reasoning (show a coherent logical reasoning, spirit of curiosity, spirit of critical thinking and initiative);
- > Communicate using Mathematical language (communicate in an intelligent, clear and concise language orally or written).

These three competencies are developed progressively at all stages of secondary education through some real life activities. The cognitive levels for forms 3 to 5 are knowledge, comprehension, application and simple cases of analysis and synthesis.

I - THE PLACE OF MATHEMATICS IN THE CURRICULUM AND ITS CONTRIBUTION TO THE LEARNING AREA.

Mathematics, offers different models and structures that constitute the framework of service tools in the Sciences and Technology learning area as well as in other learning areas through its own language. Mathematics in itself, contributes to the development of rigorous and logical reasoning, spirit of creativity and critical thinking. All these contribute to create, manage and exploit learning situations which help us to understand and master nature and laws of nature. Mathematics is at the root of all technological evolution of today's world and as such, it contributes significantly towards the modification of our environment, our life style and our thinking process. Mathematical concepts form the bases of the evolution of the computer that has considerably improved our work habits and communication.

II- DOMAINS OF LIFE AND CONTRIBUTION OF SYLLABUS TO DOMAINS OF LIFE:

The teaching/learning are constructed within five domains of life which are: Family and social life, Economic life; the environment, well- being and health; Media and communication, Citizenship. Mathematical skills help in developing competences in commercial transactions, games, planning expenditure, energy consumption, decision making, environmental protection, health, politics etc. As earlier mentioned, Mathematics is at the root of all technological evolution of today's world as it contributes significantly towards the modification of our environment, our life MATHEMATICS TEACHING SYLLABUS FOR FORMS 3, 4 AND 5 : CAMEROON Page 17 / 78

style and our thinking process. Some application of Mathematics can be seen in business, trades, politics, census, family planning, arts and music etc. Thus, be it in the domain of family and social life, economic life, the environment, well-being and health, media and communication and even citizenship, Mathematics plays a significant role.

III- FAMILIES OF SITUATIONS COVERED IN THIS PROGRAM OF STUDY

A family of situations refers to a group of life situations that share at least a common property.

For these years of secondary education five families of situations have been identified which are:

- Representation, determination of quantities and identification of objects by numbers;
- Organization of information, estimation of quantities and making choices in the consumption of goods and services;
- Representations and transformations of points and plane shapes within the environment;
- Usage of technical objects in everyday life;
- Description of patterns and relationships between quantities and ideas using symbols.

These five families of situations expose the learners to experience all possible daily life activities at this level such as Commercial transactions, games, planning expenditure, energy consumption, just to name a few. These are the areas to develop the envisaged competences. The different modules for this level are:.

a) COMPREHENSIVE TABLE SHOWING THE DIFFERENT MODULES FOR EACH CLASS

Level	Title of module	Family of situations	Duration
	Numbers, Fundamental Operations and	Representation, determination of quantities and identification of	20
	Relationships in the sets of numbers and	objects by numbers	
	between elements in a set		
	Plane Geometry	Representations and transformations of points and plane	24
Form 3		shapes within the environment	
	Solid figures	Usage of technical objects in everyday life	10
	Statistics and Probability	Organization of information, estimation of quantities and	10
		making choices in the consumption of goods and services	
	Algebra and Logic	Description of patterns and relationships between quantities and	40
		ideas using symbols	
	Numbers, Fundamental operations and	Representation, determination of quantities and identification of	24
	relationships in the sets of numbers and	objects by numbers	
	between elements in a set		
Form 4	Plane Geometry	Representations and transformations of points and plane	44

		shapes within the environment	
	Algebra and Logic	Description of patterns and relationships between quantities and	36
		ideas using symbols	
	Plane Geometry	Representations and transformations of points and plane	44
		shapes within the environment	
Form 5	Solid figures	Usage of technical objects in everyday life	20
	Statistics and Probability	Organization of information, estimation of quantities and	40
		making choices in the consumption of goods and services	

b) **PRESENTATION OF MODULES.**

As with the syllabus for forms 1 and 2, each module has two main parts: the introduction of the module and the table.

The introduction has the presentation of the module; the contribution of the module to outcome and curriculum goals, contribution of module to learning area and contribution of module to areas of living.

The table on the other hand, is made up of three main columns which are subdivided into seven columns:

- The contextual framework embodies the families of situations and some examples of real life situations where the knowledge and skills (competences) can be applied. Teachers are expected to come out with more real life situations within their environment.
- The Competences (competent actions) is divided into categories of actions and examples of actions: These are groups of some actions which are related to the mastery of the competences expected for the module.
- The Resources have the essential or core knowledge which give all the set of cognitive and affective resources which the learner needs to mobilize to successfully treat a family of situations. It is divided into four components: the mathematical notions, the skills or know-how, attitudes to be disposed or to be acquired as well as other resources (material) necessary for the acquisition of these competences.

VII- PEDAGOGIC ORIENTATIONS.

a- Recommended Methodology:

The Competency-Based – Approach is based on the Socio-Constructivist view of learning which postulates that learners actively construct new learning onto old learning through an action in a given situation. In this light, the Mathematics lesson should have teaching/ learning activities and the teaching method being centered on the learner. Each teaching/learning sequence or lesson should include:

- \circ $\,$ An introduction that will captivate and sustain the interest of the learners ;
- One or two learning activities that will facilitate the acquisition of new knowledge and new skills. An activity that will consolidate old knowledge with new knowledge;
- The essential knowledge is given as notion or methods;
- Application exercises;

b- Integration activities whenever it is possible should be well planned so that it allows students to mobilize many skills learned to competently solve a real life problem. These integration activities are aimed at making the students to employ and use the learned mathematical skills necessary to competently handle life situations related to the family of situations for the module.

c- Evaluation.

In order to determine the learner's progress in the learning process, the teacher must regularly carry out assessment of learning. Knowledge and skills are evaluated as with objective based while the criterion referenced assessment is used to evaluate development of competences. At the end of form 5, students will sit in and write the General Certificate of Education examination, Ordinary level, in Mathematics. The nature and structure of the examination will be defined by the Cameroon GCE Board.

d- Notations and symbols

Teachers should teach for accuracy and should at each time ensure that students use notations and symbols encountered at this level, accurately. No misuse of words, notations and symbols by learners should be tolerated.

The teacher introduces progressively and whenever necessary the corresponding symbol for each set of numbers such as \mathbb{R} , \mathbb{N} , \mathbb{Z} , \mathbb{Q} .

e- Calculators

A calculator is a tool that is now very common among students. It fascinates and exercises an attraction that no other instrument seems to have had. Students use it even for the simplest operations. It is only a tool, and, is no substitute for the knowledge of its user. It is for the teacher to take note of this and encourage or discourage its use, as the case may be. The learners are expected to master the following keys (functions) of the calculator: +, -, ×, ÷, π , x^2 , \sqrt{x} , $\frac{1}{x}$, x^y , sine, cosine and tangent and their inverses in degrees and in decimals of a degree.

f- Geometry

The modules on geometry should not be left to be treated at the end of the academic year. The lessons on these modules will require a lot of well prepared students' activities. Accurate drawing using geometrical instrument is highly recommended. Correct use of notations and geometrical properties should be emphasized. Learners should master the different geometrical instruments and their uses. Geometrical constructions should be taught as activities for both teacher and students.

g- Management of modules

Each module is considered as a whole for that level. Teachers are advised to alternate numerical activities with geometrical activities.

h- Formulae, symbols and notations

Students should master among others, the following formulae:

Circumference of a circle = $2\pi r$, where r is radius of the circle	Volume of pyramid = $\frac{1}{3}$ base area × height
Curved surface of right circular cylinder = $2\pi rh$	Volume of right circular cone = $\frac{1}{3}\pi r^2 h$
Area of trapezium = $\sqrt{\frac{1}{2}}(a+b)h$ GCL GCLU	Volume of sphere = $\frac{4}{3}\pi r^3$
Area of circle = πr^2	Sum of interior angles of a polygon with n sides = $(2n - 4)90^{\circ}$ or $(n - 2)180^{\circ}$
Area of a triangle = $\frac{1}{2}bc\sin A$ or $\frac{base \times height}{2}$, or $\sqrt{s(s-a)(s-b)(s-c)}$ where $s = \frac{a+b+c}{2}$	Solutions of $ax^2 + bx + c = 0$ is the formula $X = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$
Surface area of sphere = $4\pi r^2$	Determinant of the 2 by 2 matrix $\begin{pmatrix} a & b \\ c & d \end{pmatrix}$ is given by $ad - bc$.
Volume of cylinder = $\pi r^2 h$	Inverse of the 2 by 2 matrix $\begin{pmatrix} a & b \\ c & d \end{pmatrix}$ is given by $\frac{1}{ad - bc} \begin{pmatrix} d & -b \\ -c & a \end{pmatrix}$

Learners will meet and use among others, the following symbols and notations:

{}	the set of	E	is an element of
n(A)	the number of elements in the set A	¢	is not an element of
{x: }	the set of all x such that	U	union
C	is a subset of	\cap	intersection
A '	the complement of the set A	<i>f</i> (<i>x</i>)	the image of <i>x</i> under the function <i>f</i>
f:A→B	f is a function under which each element of set A has an image in set B	<i>f</i> -1	the inverse relation of the function f

f:x↦y	f is a function under which x is mapped onto y	fg	the function <i>f</i> of the function <i>g</i>
	open interval on the number line	\overrightarrow{AB}	the vector \overrightarrow{AB}
	closed interval on the number line	$\left \overrightarrow{AB}\right $	Magnitude of vector \overrightarrow{AB}
[a, b]	the interval $\{a \le x \le b\}$	а	the vector a
[a, b]	the interval $\{a \le x \le b\}$		
[a, b)	the interval { <i>a</i> ≤ <i>x</i> < <i>b</i> }	~p	not p
(a, b)	the interval { <i>a</i> < <i>x</i> < <i>b</i> }	p⇒q	p implies q
[AB]	Line segment from A to B.	¢⇔q	p implies and is implied by q (p is
АВ	Length of [AB]		equivalent to <i>q</i>)

www.meetlearn.com

MATHEMATICS TEACHING SYLLABUS FOR FORMS 3, 4 AND FORM 5

MODULE N° 10

NUMBERS, FUNDAMENTAL OPERATIONS AND RELATIONSHIPS IN THE SETS OF NUMBERS AND BETWEEN ELEMENTS OF A SET.

MMM UGG1 CREDIT: 20 C 4periods of 50mins a week

PRESENTATION OF MODULE

This module is aimed at making the learner competent within the families of situations '**Representation**, determination of **quantities and identification of objects by numbers**'. It has the following as categories of action: Determination of a number, reading and writing information using numbers, verbal interaction on information containing numbers and estimation and treatment of quantities.

This module will permit the learner to apply all what was acquired in forms 1 and 2 under numbers and sets of numbers and extend it to evaluate measures involving large numbers arising in branches of science, recognize and represent these large numbers using indices.

This module is introduced by indices and logarithms, then sets of numbers (\mathbb{N} , \mathbb{Z} , \mathbb{Q} , \mathbb{R}), set theory and ends with arrangement of information into rectangular arrays called matrices. In this module learners get to discover very exciting number patterns and properties.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

This module contributes to a good mental structure that will permit the learner to react competently in different life situations as well as be able to communicate concisely and precisely using numbers. Learners will be able to recognize, describe and represent numbers and their relationships and to count, estimate, calculate and check with competence and confidence in solving problems. Translate set language into ordinary English and vice versa, describe and extend pattern to solve problems.

CONTRIBUTION OF MODULE TO LEARNING AREA

The mastery of this module equips the learner with basic knowledge and skills (know -how) on which further learning in Mathematics and the pure sciences will be based. It will also equip learners with basic know-how needed in other school subjects such as the human sciences, commercial education etc. Indices, logarithms and their graphs for example, are used in other subjects such as calculation of growth rate of seedlings or bacteria in biology, population growth in geography, pH of a solution in chemistry, rate of decay with radioactive substances in Physics etc. Matrices are used in treating networks and eventually for the solution of simultaneous equations.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

This module provides the opportunities for the learners to represent very large numbers in index form thus gaining time and space and also for easy understanding or appreciation of its value. Graphs of logarithmic and/or exponential functions are used for economic applications such as simple and compound interest, annuities etc. Record inventory or data in matrix form will help for easy calculation of stock. The learner with a good sense of number and operations with numbers has the mathematical confidence to make sense and meaning in various contexts. These knowledge and skills will contribute in the management of family finances; implication in different monetary transactions, etc justifies its importance in consumption and production of goods and services, social, economic and environmental issues, welfare and health, citizenship, media and communication.

MODULE N° 11

PLANE GEOMETRY.

CREDIT: 24 / 4 periods of 50mins

GENERAL PRESENTATION

All what was done from points, lines, plane figures, angles, metric system form basic knowledge and skills necessary to continue this module on geometry. This module therefore, begins with congruency and similarity and looking more on congruent plane figures and similar plane figures, starting with triangles. Vectors in 2-dimension is introduced here and the last part deals with some trigonometry.

This module is within the families of situations: **Representations and transformation of plane shapes within the environment**. Three categories of actions are involved namely: Perception of the physical environment, production of plane shapes and transformation of the physical environment and determination of measures.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

This module will help learners to understand the conditions for congruency in plane figures and similarity in plane figures. It will continue to improve upon learners' understanding and appreciation of pattern, precision and beauty in natural and cultural forms. Learners will also develop the ability to visualize measure, represent, describe and compare plane figures in the environment, use vector methods to solve problems and associate vectors to people and things in motion, use sine, cosine or tangent in right-angled triangles to determine distances. In addition, learners will develop the sense of order, rigour in working, ability to represent, accuracy and sense of precision and initiation to scientific method in handling life situations. The ability to construct will help learners to be able to represent and interpret the physical environment and also be able to investigate and model situations in the environment. As a result, they will be able to make sensible estimates, verify results, measure accurately, locate positions in real life as well as be alert to the reasonableness of measurements and calculation results.

Critical thinking, creativity and sense of initiative that learners will also develop are attitudes that will contribute to make a citizen autonomous and responsible in carrying out his social roles.

CONTRIBUTION OF MODULE TO LEARNING AREA

Plane geometry is one of the main parts of the Mathematics syllabus due to the expected learning outcome. Measuring in general relates directly to the scientific, technological and economic world of the learner. Accurate measuring and calculations involving lengths, angles and areas, representations and descriptions are an integral part of chemistry, Biology, Physics and other parts of MATHEMATICS TEACHING SYLLABUS FOR FORMS 3, 4 AND 5 : CAMEROON Page 29 / 78

Mathematics. Situations of congruency and similarity are seen in Biology, Chemistry and also in the cultural environment of the learners. The learning of plane geometry provides the basic knowledge and skills needed to study 3-dimensional geometry. The third category of actions shows interaction between numerical activities and geometrical activities.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

The study of the module enables the learners to:

- Develop the ability to visualize, reason and justify,
- Interpret, understand, classify, appreciate and describe the world through 2-dimensional shapes, their locations, movement and relationships.

By these, they should be able for example to use national flags to demonstrate transformations and symmetry in designs; investigate and recognize the geometrical properties and patterns existing in traditional and modern architecture; use maps in geography as specific forms of grid and also investigate geometric patterns in art.

The areas of living for which knowledge and skills from this module are directly applied are: Family and social life, Economic life, Environment, welfare and health, citizenship, media and communication. The learner each uses or comes across objects from which geometrical shapes can be identified. The outline of figures which are the lines, angles, planes and their intersections are what constitute the physical environment for they are the bases for which real life subjects are constructed.

The study of size, distances, and position of objects in the environment is important since it will provide a language for describing and representing the physical environment and methods for analyzing and drawing conclusions about real life phenomena. Symmetry contributes in the study of the rules and principles of art and the appreciation of the beauty and taste.

MODULE N° 12

SOLID FIGURES.

CREDIT: **10hours** / 4 teaching hours a week

GENERAL PRESENTATION OF GUID COLU

This module deals with description, recognition, identification and representation of the sphere, cone, pyramid and the prism. This module is within the family of situations: **Usage of technical objects in everyday life**. The categories of actions identified for this module are: Recognition of objects; production of objects; determination of measures. In school, at home and in the market place or on a journey, students encounter different shapes, as such the description and representation of these shapes throughout the module are expected to be treated in context.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOAL

The study of geometry and 3-dimensional geometry in particular helps in the construction of reasoning, description and calculation techniques. As with plane geometry, the study of solids will enable the learner to develop the ability to visualize, interpret, calculate relevant values, reason and justify, classify, appreciate and describe the world through 3-dimensional objects. It will focus on the properties, relationships, orientations, positions and transformations of 3-dimensional objects. They will also develop the spirit of initiative, creativity and enterprise, the development of arts such as painting and drawing as well as the development of aesthetic values. All these competences contribute in becoming autonomous and independent in carrying out different activities in the environment which is full of manmade and natural objects.

CONTRIBUTION OF MODULE TO LEARNING AREA

Measuring in general is used greatly in the sciences, the technological and economic world of the learner. Accurate measuring and calculations involving volume or quantity in general, are part of real life. The competences developed by learners here are fundamental to the mastery of other science subjects such as Biology, Physics, Chemistry and other parts of Mathematics.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

As was mentioned earlier with plane geometry, the study of this module enables the learners to:

- Develop the ability to visualize, reason and justify,
- Interpret, understand, classify, appreciate and describe the world through 3-dimensional shapes, their locations, movement and relationships.

By so doing, they should be able for example to use national flags to demonstrate transformations and symmetry in designs; investigate and recognize the geometrical properties and patterns existing in traditional and modern architecture; use maps in geography as specific forms of grid and also investigate geometric patterns in art.

The different areas of living for which we see direct application of the competences from this module are: Family and social life, Economic life, Environment, welfare and health as well as Media and communication. The study of this module also provides a language for describing the physical world and gives the methods for analyzing and drawing conclusions about real world phenomena which subsequently go to improve understanding of the patterns, precision, achievement and beauty in natural and cultural forms.

MODULE N° 13

STATISTICS AND PROBABILITY.

CREDIT: **10 hours** / 4 teaching hours a week

GENERAL PRESENTATION OF LOOU

This module deals with representation of data from real life situations in different forms (frequency table, pictogram, bar chart, histogram, pie chart) and possible interpretations. With the study of data handling, the learners will develop the skills to collect, organize, display, analyse and interpret information. This model is within the family of situations '**Organization of information and estimation of quantities**' and has as categories of actions: Collection, organization and exploitation of information; Interpretation of results.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

This module will help learners collect, process and interpret data and understand, estimate and use probabilities. It will also develop in learners the sense of organization, precision and good judgment. Learners will be able to access information in a single database. Use appropriate language to justify decisions. These attitudes will help the learner to be able to take up duties as a member of the family, make informed decisions, and develop autonomy in the production and consumption of goods and services. They will make sense of data after collecting, organizing and interpreting, drawing conclusions and making predictions. They will use mathematics effectively and critically showing responsibility towards the environments and health of others.

CONTRIBUTION OF MODULE TO LEARNING AREA.

Great deal of research work in science and technology (health and technological products etc) and other learning areas such as Economics and Geography are represented in statistical form.

CONTRIBUTION OF MODULE TO AREA OF LIVING

Information in statements, graphs, tables and charts are presented to us daily through television, radio, news papers or any other form of media and communication. This information could be on crime rates, rainfall, sport results, election polls, government spending, rate of infant mortality, population or economic growth. The interpretation of this data after analyzing will lead learner to meaningful participation in political, social and economic activities. The learners will develop a sense of how mathematics can be used to: manipulate data to represent or misrepresent trends and pattern, provide solutions that can sustain or destroy the environment, promote or harm the health of others, understand distribution of resources etc. Through the study of chance on the

other hand, the learner will develop skills and techniques for making informed choices and coping with randomness and uncertainty. Applications of competences within this module are found in the areas of living: Family and social life, Economic life, citizenship, media and communication. Within these areas, collection, organization, displaying and interpretation of simple data by the learners are essential skills that will help them to assume their positions as responsible members of a family, make good choices on what to consume (information, goods, services), participate meaningfully in basic economic activities, be able to show high level of responsibility towards the environment, be able to provide solutions that can improve the environment and will be able to judge economic trends and patterns.

MODULE N° 14

ALGEBRA AND LOGIC.

CREDIT: 40hours / 4periods of 50mins a week

GENERAL PRESENTATION OF LOOK COW

Algebra focuses on describing pattern and relationships between variables through the use of symbolic expressions, graphs and tables. This module is the extension of basic algebra and starts here with transposition of formulae then to introducing relations and functions. Functions, relations, equations, inequalities, systems of equations and graphs are examples of models. This module is made up of the families of situations: **Describing patterns and relationships between quantities using symbols**. There are three categories of action namely: Interpretation of algebraic models; determination of quantities from algebraic models; representation of quantities and relationships.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

The mastery of this module will help the learner to solve problems using algebraic language and skills and also to examine and study relationships between real life situations. Through the use of symbolic expressions, graphs and tables, learners will be able to recognize, describe and represent patterns and relationship as well as translate real life problems into different forms of equations to solve. Logic being Mathematical reasoning will help learners develop the skill of logical reasoning 5deductive and inductive), spirit of critical thinking for proper decision taking.

CONTRIBUTION OF MODULE TO LEARNING AREA

Algebra is the language for investigating and communicating most of Mathematics, sciences and technological work. Formulae are highly used in natural sciences (calculating air pressure, resistance, voltage), and in economic growth such as calculating pension for those on retirement etc. Learners will achieve efficient manipulative skills in the use of algebra, and a thorough understanding of these is essential for understanding any field of mathematics and many technical areas where mathematics is applied. This module is a foundation for more advanced mathematics, science and technology in general.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

The areas of living where this module is employed are: Family and Social life, Economic life, Environment, Welfare and health; Citizenship, Media and Communication. Learners develop the competences of translating phrases and sentences in real life into variable expressions and equations to find solutions. They will use algebraic language and skills to describe patterns and relationships in a way that builds awareness of other learning areas as well as issues related to human rights, social economic

life, cultural life, political and environmental issues. Many real-world phenomena can be modeled by relations such as: the time a satellite takes to complete a revolution around the earth in terms of its speed and altitude; with finances to find simple interest I earned on an investment P after a period of time t at a rate r, is given as I = Prt. Therefore, in other subject areas, as well as in real life, connections are made between algebraic representations and the problem situations so as to provide better understanding about Mathematical concepts and the different problem situations. Learners will be able to manipulate graphs in media to represent trends and pattern, represent relationships within an ecosystem, exploit and design geometrical patterns in art and architecture and appreciate symmetrical patterns that occur in nature.

MODULE N° 15

NUMBERS, FUNDAMENTAL OPERATIONS AND RELATIONSHIPS IN THE SETS OF NUMBERS AND BETWEEN ELEMENTS OF A SET.

CREDIT: **24hours** / 4 periods of 50mins a week

www.meetlearn.com

PRESENTATION OF MODULE

This module is aimed at making the learner competent within the families of situations '**Representation**, determination of **quantities and identification of objects by numbers**'. It has the following as categories of action: Determination of a number, reading and writing information using numbers, verbal interaction on information containing numbers and estimation and treatment of quantities.

This module starts with estimates and approximations, writing numbers in standard form and extends to surds, indices and basic logarithms then ends with matrices.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

This module contributes to a good mental structure that will permit the learner to react competently in different life situations as well as be able to communicate concisely and precisely expressing large numbers and giving a realistic estimate of a quantity.

CONTRIBUTION OF MODULE TO LEARNING AREA

The mastery of this module equips the learner with basic knowledge and skills (know -how) on which further learning in Mathematics and other school subjects especially in the sciences will be based. Decimal numbers are used in the sciences for measuring, weighing and also for the evaluation of quantities.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

This module provides the opportunities for the learners to engage with the historical development of numerical counting and writing system. Mastery of the concepts of equality, inequality, the basic operations $(+, -, \times, \div)$ and their effects on numbers, percentages and situations of proportionality are fundamental tools a learner will need in real life and throughout life. These skills will contribute in the management of family finances; implication in different monetary transactions, etc justifies its importance in consumption and production of goods and services, social, economic and environmental issues, welfare and health, citizenship, media and communication.

MODULE 16 PLANE GEOMETRY. FORM 4

CREDIT: 44 / 4 periods of 50mins a week

GENERAL PRESENTATION OF GLOCU

All what was done from points, lines, plane figures, angles, metric system form basic knowledge and skills necessary to continue this module on geometry. This module continues with some aspects of vectors and vector geometry. It goes further to simple transformation, the loci and geometrical construction, trigonometry then circle and circle theorems. It ends with then earth as a sphere. This module is within the families of situations: **Representations and transformation of plane shapes within the environment.** Three categories of actions are involved namely: Perception of the physical environment, production of plane shapes and transformation of the physical environment and determination of measures.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

This module will continue to improve upon learners' understanding and appreciation of pattern, precision and beauty in natural and cultural forms. Learners will also develop the ability to visualize, measure, represent, describe and compare plane figures in the environment, use vector methods to solve problems and associate vectors to people and things in motion, use sine, cosine or tangent in right-angled triangles to determine distances. In addition, learners will develop the sense of order, rigour in working, ability to represent, accuracy and sense of precision and initiation to scientific method in handling life situations. The ability to construct will help learners to be able to represent and interpret the physical environment and also be able to investigate and model situations in the environment. As a result, they will be able to make sensible estimates, verify results, measure accurately, locate positions in real life as well as be alert to the reasonableness of measurements and calculation results.

Critical thinking, creativity and sense of initiative that learners will also develop are attitudes that will contribute to make a citizen autonomous and responsible in carrying out his social roles.

CONTRIBUTION OF MODULE TO LEARNING AREA

Plane geometry is one of the main parts of the Mathematics syllabus due to the expected learning outcome. Measuring in general relates directly to the scientific, technological and economic world of the learner. Accurate measuring and calculations involving lengths, angles and areas, representations and descriptions are an integral part of chemistry, Biology, Physics and other parts of Mathematics. Vectors and trigonometry are used in Physics while transformation, circle are applied in other science subjects. The earth as a sphere shows the application of mathematics to understand nature. Transformation is used by computer and video

game programmers to crate patterns for animations. The learning of plane geometry provides the basic knowledge and skills needed to study 3-dimensional geometry.

CONTRIBUTION OF MODULE TO AREAS OF LIVING COLU

The study of the module enables the learners to:

- Develop the ability to visualize, reason and justify,
- Interpret, understand, classify, appreciate and describe the world through 2-dimensional shapes, their locations, movement and relationships.

By these, they should be able for example to use national flags to demonstrate transformations and symmetry in designs; investigate and recognize the geometrical properties and patterns existing in traditional and modern architecture; use maps in geography as specific forms of grid and also investigate geometric patterns in art.

The areas of living for which knowledge and skills from this module are directly applied are: Family and social life, Economic life, Environment, welfare and health, citizenship, media and communication. The learner each uses or comes across objects from which geometrical shapes can be identified. The outline of figures which are the lines, angles, planes and their intersections are what constitute the physical environment for they are the bases for which real life subjects are constructed. The study of size, distances, and position of objects in the environment is important since it will provide a language for describing

and representing the physical environment and methods for analyzing and drawing conclusions about real life phenomena.

Symmetry contributes in the study of the rules and principles of art and the appreciation of the beauty and taste.

MODULE N° 17

ALGEBRA AND LOGIC.

CREDIT: **36hours** / 4 teaching hours a week

GENERAL PRESENTATION OF LOOU

Algebra focuses on describing pattern and relationships between variables through the use of symbolic expressions, graphs and tables. This module is the extension of basic algebra and starts here with algebraic processes, equations and inequations then sequences. It is made up of the families of situations: **Describing patterns and relationships between quantities using symbols**. There are three categories of action namely: Interpretation of algebraic models; determination of quantities from algebraic models; representation of quantities and relationships.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

The mastery of this module will help the learner to solve problems using algebraic language and skills and also to examine and study relationships between real life situations. Through the use of symbolic expressions, graphs and tables, learners will be able to recognize, describe and represent patterns and relationship as well as translate real life problems into different forms of equations to solve.

CONTRIBUTION OF MODULE TO LEARNING AREA

Algebra is the language for investigating and communicating most of Mathematics, sciences and technological work. Formulae are highly used in natural sciences (calculating air pressure, resistance, voltage), and in economic growth such as calculating pension for those on retirement etc. Learners will achieve efficient manipulative skills in the use of algebra, and a thorough understanding of these is essential for understanding any field of mathematics and many technical areas where mathematics is applied. This module is a foundation for more advanced mathematics, science and technology in general.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

The areas of living where this module is employed are: Family and Social life, Economic life, Environment, Welfare and health; Citizenship, Media and Communication. Learners develop the competences of translating phrases and sentences in real life into variable expressions and equations to find solutions. They will use algebraic language and skills to describe patterns and relationships in a way that builds awareness of other learning areas as well as issues related to human rights, social economic

life, cultural life, political and environmental issues. In other subject areas, as well as in real life, connections are made between algebraic representations and the problem situations so as to provide better understanding about Mathematical concepts and the different problem situations. Business, industry, engineers and all sorts of workers use algebra to solve many problems. Learners will be able to manipulate graphs in media to represent trends and pattern, represent relationships within an ecosystem, exploit and design geometrical patterns in art and architecture and appreciate symmetrical patterns that occur in nature.

FORM 5

MATHEMATICS TEACHING SYLLABUS FOR FORMS 3, 4 AND 5 : CAMEROON

MODULE 18

PLANE GEOMETRY. FORM 5

CREDITS: 44hours of 4 hours a week

GENERAL PRESENTATION GELIEOLU COLL

This module deals with polygons, quadrilaterals and symmetry. This module is within the families of situations: **Representations and transformation of plane shapes within the environment.** Three categories of actions are involved namely: Perception of the physical environment, production of plane shapes and transformation of the physical environment and determination of measures.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

This module will help learners be familiar with geometrical structures, relationships and representations of plane shapes. Learners will develop the ability to measure, represent, describe and compare plane shapes in the environment. They will be able to appreciate and identify symmetry and symmetrical figures in the environment. The ability to construct these figures will help learners to be able to represent and interpret the physical environment and also be able to investigate and model situations in the environment. Critical thinking, creativity and sense of initiative that learners will also develop are attitudes that will contribute to make a citizen autonomous and responsible in carrying out his social roles.

CONTRIBUTION OF MODULE TO LEARNING AREA

Plane geometry is one of the main parts of the Mathematics syllabus due to the expected learning outcome. Measuring in general relates directly to the scientific, technological and economic world of the learner. Accurate measuring and calculations involving lengths, angles and areas, representations and descriptions are an integral part of chemistry, Biology, Physics and other parts of Mathematics. Symmetry is found and applied in Chemistry, Biology and in computer sciences.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

The areas of living for which knowledge and skills from this module are directly applied are: Family and social life, Economic life, Environment, welfare and health, citizenship, media and communication. The learner each uses or comes across objects from which geometrical shapes can be identified. The outline of figures which are the lines, angles, planes and their intersections are what constitute the physical environment for they are the bases for which real life subjects are constructed.

The study of size, distances, and position of objects in the environment is important since it will provide a language for describing and representing the physical environment and methods for analyzing and drawing conclusions about real life phenomena. Symmetry contributes in the study of the rules and principles of art and the appreciation of the beauty and taste.

MODULE N° 19

STATISTICS AND PROBABILITY.

CREDIT: 40 hours / 4 teaching hours a week

GENERAL PRESENTATION OF LOCU

This module deals with representation of data from real life situations in different forms (frequency table, pictogram, bar chart, pie chart) and possible interpretations. With the study of data handling, the learners will develop the skills to collect, organize, display, analyse and interpret information. This model is within the family of situations '**Organization of information and estimation of quantities**' and has as categories of actions: Collection, organization and exploitation of information; Interpretation of results.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOALS

This module will help learners collect, process and interpret data and understand, estimate and use probabilities. It will also develop in learners the sense of organization, precision and good judgment. Learners will be able to access information in a single database. Use appropriate language to justify decisions. These attitudes will help the learner to be able to take up duties as a member of the family, make informed decisions, and develop autonomy in the production and consumption of goods and services. They will make sense of data after collecting, organizing and interpreting, drawing conclusions and making predictions. They will use mathematics effectively and critically showing responsibility towards the environments and health of others.

CONTRIBUTION OF MODULE TO LEARNING AREA.

Great deal of research work in science and technology (health and technological products etc) and other learning areas such as Economics and Geography are represented in statistical form.

CONTRIBUTION OF MODULE TO AREA OF LIVING

Information in statements, graphs, tables and charts are presented to us daily through television, radio, news papers or any other form of media and communication. This information could be on crime rates, rainfall, sport results, election polls, government spending, rate of infant mortality, population or economic growth. The interpretation of this data after analyzing will lead learner to meaningful participation in political, social and economic activities. The learners will develop a sense of how mathematics can be used to: manipulate data to represent or misrepresent trends and pattern, provide solutions that can sustain or destroy the environment, promote or harm the health of others, understand distribution of resources etc. Through the study of chance on the other hand, the learner will develop skills and techniques for making informed choices and coping with randomness and

MATHEMATICS TEACHING SYLLABUS FOR FORMS 3, 4 AND 5 : CAMEROON

uncertainty. Applications of competences within this module are found in the areas of living: Family and social life, Economic life, citizenship, media and communication. Within these areas, collection, organization, displaying and interpretation of simple data by the learners are essential skills that will help them to assume their positions as responsible members of a family, make good choices on what to consume (information, goods, services), participate meaningfully in basic economic activities, be able to show high level of responsibility towards the environment, be able to provide solutions that can improve the environment and will be able to judge economic trends and patterns.

MODULE N° 20

SOLID FIGURES.

CREDIT: **20 hours** / 4 teaching hours a week

GENERAL PRESENTATION OF GUID COLU

This module deals with description, recognition, identification and representation of the sphere, cone, pyramid and the prism. This module is within the family of situations: **Usage of technical objects in everyday life**. The categories of actions identified for this module are: Recognition of objects; production of objects; determination of measures. In school, at home and in the market place or on a journey, students encounter different shapes, as such the description and representation of these shapes throughout the module are expected to be treated in context.

CONTRIBUTION OF MODULE TO OUTCOME AND CURRICULUM GOAL

The study of geometry and 3-dimensional geometry in particular helps in the construction of reasoning, description and calculation techniques. As with plane geometry, the study of solids will enable the learner to develop the ability to visualize, interpret, calculate relevant values, reason and justify, classify, appreciate and describe the world through 3-dimensional objects. It will focus on the properties, relationships, orientations, positions and transformations of 3-dimensional objects. They will also develop the spirit of initiative, creativity and enterprise, the development of arts such as painting and drawing as well as the development of aesthetic values. All these competences contribute in becoming autonomous and independent in carrying out different activities in the environment which is full of manmade and natural objects.

CONTRIBUTION OF MODULE TO LEARNING AREA

Measuring in general is used greatly in the sciences, the technological and economic world of the learner. Accurate measuring and calculations involving volume or quantity in general, are part of real life. The competences developed by learners here are fundamental to the mastery of other science subjects such as Biology, Physics, Chemistry and other parts of Mathematics.

CONTRIBUTION OF MODULE TO AREAS OF LIVING

As was mentioned earlier with plane geometry, the study of this module enables the learners to:

• Develop the ability to visualize, reason and justify,

• Interpret, understand, classify, appreciate and describe the world through 3-dimensional shapes, their locations, movement and relationships.

By so doing, they should be able for example to use national flags to demonstrate transformations and symmetry in designs; investigate and recognize the geometrical properties and patterns existing in traditional and modern architecture; use maps in geography as specific forms of grid and also investigate geometric patterns in art.

The different areas of living for which we see direct application of the competences from this module are: Family and social life, Economic life, Environment, welfare and health as well as Media and communication. The study of this module also provides a language for describing the physical world and gives the methods for analyzing and drawing conclusions about real world phenomena which subsequently go to improve understanding of the patterns, precision, achievement and beauty in natural and cultural forms.

MM	W.Me	etlec	-Describe solids in the	Solids	-Find length, surface areas	-Sense of organization	-Calculator
		Recognition of objects	environment	Cone, cuboids, cylinders, prisms, pyramid,	and volumes of similar solid figures using	-Sense of	-measuring instrument
		Productions	described by somebody	tetrahedron, sphere;	the scale factors ;	initiative	
	-Works of arts	of objects	-	3-dimensional problems	-Find total surface area and volume of	-Precision in calculation	-concrete objects
		Linking volume to	-Produce cartoons for	-Scale drawing	solids ; -Recognize a	A In 1144 - 4 -	-Models of the
Usage of technical	-Form for moulding	capacity	packaging or baking tins	-Calculations involving 3-	tetrahedron as a pyramid; -Draw solids	-Ability to visualize	different shapes
objects in every day life.	-Baking dishes		-Compare capacity or volume of two	dimension problems	(cone, cube, cylinder, pyramid,	-Sense of appreciation	-Cardboard
	-Digging a well		containers	-Volume of pyramid and	tetrahedron etc) of given		-Containers
	-Movable TV stand	Determinatio n of measure and how	- -Determine the volume of	tetrahedron; -Angle between	dimensions to a given scale ; -Calculate	-Creativity	-Geometrical instrument
		much an object can	water a tank can contain	two lines;	angle between two lines ;	-Spirit of enterprise	-Manila papers,
		contain		-Angle between a line and a plane	-Calculate angle between a line and a plane.		

Article 2: The syllabus presented in article one here above shall be implemented as from the beginning of the 2016-2017 school year;

Article 3: All previous provisions repugnant hereto are hereby repealed;

<u>Article 4</u>: Inspectors Coordinator General, the Director of General Secondary Education, the Director of Examinations and Certification, Regional Delegates of Secondary Education, Divisional Delegates of Secondary Education, Education Secretaries of various Private Educations Agencies, Principals of public and private schools, each in their own sphere shall be charged with the strict implementation of this order which shall be inserted and published in the Official Gazette in English and French.
